Master Plumber Name & License Number: _____

Estimated Cost of Project: \$ _____

Property Owner: _____

Property Address: _____

Backflow Type: _____

Turf Sprinkler Permit Fees:

Residential or Commercial : \$25.00

City policy now allows the installation of irrigation sprinkler heads and lines within the public right-of-way. However, if the owner elects to install sprinkler heads and lines in the public right-of-way then, as a condition of the granting of a permit, the owner agrees that no liability shall accrue to the City as a result of damage from construction, reconstruction, maintenance, improvement, repair, snowplowing, or other related activities within or on or under the public right-of-way.

Put another way, any damage for any reason to irrigation sprinkler heads or lines installed in the public right-of-way will be the property owner's responsibility to repair.

Property Lines are generally located 33 feet from the center line of the adjoining streets

Backflow prevention must be installed per the plumbing code SPS 382.41.1. The most common assembly will be a Pipe Applied Atmospheric Type Vacuum Breaker (ASSE 1001). This type will require a wild head between the vacuum breaker and any downstream valve to relieve any back pressure. A second possibility is a Pressure Vacuum Breaker (ASSE 1010) this type of vacuum breaker needs to be registered with the Department of Commerce and tested yearly. A third type is a Reduced Pressure Principle Backflow Preventer (ASSE 1013). This type will be installed inside the building and will also need to be registered with the Department of Commerce and tested yearly. Inspections are required upon completion of the installation.
